IndSearch offers Ph.D. programme in various functional areas of management including Financial Management, Marketing Management, Information Technology Management, Human Resources Management and Operations Management which is permanently recognized by Savitribai Phule Pune University.

About the Competition:

Energy is a major factor influencing financial stability at national and international levels. Fluctuations in energy costs can affect profitability and pricing strategies for industries on one hand and on the other hand they have impact on national economic policies

Energy resources like crude oil, natural gas, coal and renewable energy prices are key elements for every industry. They have a direct impact on cost of products & services. They also affect directly the efficiency of the supply chain and therefore the market forces.

The volatility of energy supply in short run can affect prices, demand and profit margins. In the long run impact is more profound on the level of productivity and competitiveness of the industry at national and international levels. It is therefore essential to understand the impact of energy price volatility on the future of industry in each functional area.

This also raises questions in the broader areas of what would be the impact on a country's economy if the imbalance in supply and demand of energy sources continue for a longer period? How would it affect the markets and the global business and strategic relations? Apart from having direct impact at macro level on Balance of payment or trade relations, all vital sectors of every economy like transportation, manufacturing, power generation will be affected causing direct impact on the level of development.

In light of these complexities, this research paper competition invites students to explore the various aspects of influence of Energy prices and related financial volatility, leading to sub themes of the topic:

1. Energy Prices and Their Impact on Financial Markets
2. Energy Costs and Corporate Profitability
3. Renewable Energy and the Future of Finance
4. Energy Imports and Exchange Rate Stability
5. Energy Costs and Supply Chain Performance
6. Renewable Energy and Sustainable Supply Chains
7. Green Energy and the Future of Operations
8. Energy Prices and Consumer Buying Behaviour
9. Energy Costs and Product Pricing Strategies
10. Energy Crisis and Its Impact on Employment
11. Green Jobs and the Future of Human Resources
12. AI and Analytics in Energy Management
13. Business Analytics for Sustainable Energy Management

Objective:
